

QUICKSTART H320 A3 LAMINATOR UK

Overview

Protect, preserve and enhance your documents efficiently with the world's fastest pouch laminator. Documents are laminated with a glass clear laminate film on both sides of the paper, making the documents waterproof, tamperproof and giving great looking results. The H320 is the superior choice for the office professional who wants to maximise their productivity.

If you are frustrated with the length of time you need to wait for a standard laminator to warm up in order for you to use it, then choose the H320 QuickStart. GBC QuickStart is ready to laminate in less than 1 minute from start up, five times faster than the competition. You can laminate 15 A4 documents (using GBC HighSpeed pouches) in the time it takes the competition to laminate just 1. QuickStart is the obvious choice where time and productivity are of vital importance.

With a fast throughput speed of 500mm per minute you can laminate up to 100 A4 documents per hour to ensure that you maximise your productivity. Additionally, SureFlow anti-jam performance comes as standard to give you stress free lamination at its best, and for those occasionally mis-fed documents we have incorporated our patented QuickRelease technology. When you see the document starting to mis-feed just pull the document towards you and it will be released effortlessly from the laminator.

The H320 QuickStart is easy to use with a simple one touch button user interface with a stylish design, making it a great addition to any office environment.

With safety in mind an auto shut-off will be activated after 30 minutes of inactivity. If you compare the power consumption to laminate 1 A4 document between the QuickStart and a standard laminator the QuickStart consumes 30% less power, making it the ideal environmentally friendly choice.

Weighing 8.5Kg and sized 400(H) x 176(W) x 117(D) this is an easily storable and transportable choice for any office.
